

## Sodium Polyacrylate (water grabber, instant gel)

I use Flinn brand. Add two tablespoonfuls to a dry, clean and empty cylinder vase. Fill another identical vase near the top with distilled water. Quickly pour the water from one vase into the vase with the sodium polyacrylate. After a couple of seconds, flip over the vase with the mixture and it will stay in the vase.

Add a tablespoonful of NaCl to the top of the gel and stir to liquify the mixture and pour it down the drain.
